PROFILE

Full-stack JS/TS developer focused on generative AI, with a product and IT systems background since 2016. I build web applications through to production with React, Next.js, TypeScript, Supabase/PostgreSQL and AI coding agents: specifications, small increments, code review, testing and delivery. 3 automotive projects since 2024.

SELECTED PROJECTS

BonneOccaz.fr — Beta product

An automotive marketplace for searching, publishing and comparing listings, enhanced with decision tools, professional workflows, an AI automotive advisor and a platform help assistant.

RevGuessr.com — Web game · Live

A web game where players identify a car from its engine sound, with around 850 sounds. Solo challenges, real-time multiplayer, leaderboard, progression, Premium, player contributions and listening guides, in three languages.

Paddock Studio — Racing simulator app · Release in preparation

An in-game app for the Assetto Corsa racing simulator (Custom Shaders Patch): one-click time, date and weather atmospheres, a realistic visual filter, cameras, and a race engineer that adapts tyres, pressures and driver aids to the weather.

EXPERIENCE

Full Stack Builder / JS/TS Developer

2024 - Present · Independent · BonneOccaz.fr, RevGuessr.com and Paddock Studio

Designed and shipped 2 automotive web applications, BonneOccaz and RevGuessr, with React, Next.js, TypeScript and Supabase/PostgreSQL, using AI agents to specify, review, refactor and test every release.

Projects started alongside my role at Normandie Structures in 2024-2025.

- Designed the RAG/CAG retrieval behind the BonneOccaz assistant: 97 FAQ entries and 11 Pro sections, relevance threshold, validated citations and injection tests, evaluated on 32 questions (top 3, 90% threshold)
- Set up agentic workflows: project instructions, specifications, implementation, review and testing for every release
- Built RevGuessr's real-time multiplayer, up to 12 players per game (Supabase Realtime, RLS)
- Automated delivery (Git/GitHub, CI/CD, Vercel, Resend) and maintained the applications in production

IT Manager

2018 - 2025 · Normandie Structures · Normandy, France

Autonomous ownership of IT systems, business requirements and technical solution rollouts, including support, incident management, user training and vendor coordination.

Apprentice Project Manager

2016 - 2018 · Renault Cléon · Cléon, France

Developed two business applications in an industrial environment: an ASP.NET MVC (C#) application for new-vehicle parking and a PHP application for stock and tool management with QR codes.

- Designed and operated the related MySQL and SQL Server databases

EDUCATION

2016 - 2018 · Software Engineering Manager - French national qualification, RNCP / EQF level 6 (4 years of higher education) · CESI Rouen · 2 years after the BTS, work-study programme.

2016 · BTS SIO - SLAM software track · La Châtaigneraie, Mesnil-Esnard

LANGUAGES

French: native · English: B2, reads and writes technical material regularly

SKILLS

Frontend : React · Next.js · TypeScript · JavaScript · Tailwind CSS

Backend & data : Node.js · Supabase · PostgreSQL · REST APIs · SQL

AI & quality : Generative AI · LLM · RAG / CAG · AI coding agents · Testing & code review

Systems & collaboration : IT strategy · Project Management · Business analysis · Requirements gathering · User support
